Eagle Environmental, Inc.

Specialized services for coal-fired power plants!

Fugitive coal dust (and its by-products) can be found in many areas of today's fossil fuel electrical generating plants:

- Rail, truck, vessel, and conveyance areas
- Ash silos
- Storage silos
- Transfer stations and points
- Boiler areas

just to name a few.

Dust collection equipment helps to minimize this nuisance dust. However, a properly maintained dust collection system eliminates not only this by-product, but also helps to insure compliance with all local, state, and federal EPA regulations.

Eagle Environmental, Inc. is a leader in the area of dust collector and bag house maintenance for the fossil fuel power generation industry, offering:

1. Unit inspections
2. Complete filter change-out services
3. Blower, pneumatic system, and structural inspections and repairs.
4. Troubleshooting
5. Electrical and weld services
6. Site surveys
7. On-site training seminars in dust collection principles, operation, and routine maintenance for all operators.
8. Complete reporting at conclusion of specified work.

along with a host of other services involving the proper operation of your dust collection equipment.

We also offer electrostatic precipitator cleaning as part of our complete service package.

All of our services are available on a 24/7 basis, nationwide, and are backed by a complete customer satisfaction guarantee!
